| 1st subtracted day on Earth there's 30 Tishrei 1 weekday difference $-5.33 \text { ED }$ |  | Notes: <br> "ED" stands for Earth Difference. It's the hours of difference from the starting point of the calendar and the parallel days on Earth. The difference grows by 40 minutes every day. Every month or two we subtract a day from the Martain month with the aim of keeping the Jewish holidays within 24 hours of when it's being celebrated on Earth. Some of the Hebrew Martian months will be shorter. |  |  |  |  |
